

Junction Box and Wiring Guideline for Twisted Pair LonWorks® Networks

December 2010

LONWORKS Engineering Bulletin

New Information

Revision P adds a new vendor, JJ-Lapp Cable, provides new listings for Connect-Air Wire and Cable, and includes Category 6 cable for the TP/FT-10 channel.

Introduction

This bulletin identifies the different types of cabling and junction boxes that may be used in twisted pair LONWORKS networks. The recommendations presented herein are intended to assist network integrators, OEMs, electrical system designers, interconnection device manufacturers, and cable manufacturers, and are provided for informational purposes only.

For specific details on the operation and cabling requirements of the FT 3120®/FT 3150® Free Topology Smart Transceivers, TP/FT-10 (FTT-10A and LPT transceivers), TP/XF-78 (TPT/XF-78 transceiver), TP/XF-1250 (TPT/XF-1250 transceiver), and TP-RS485 (TP-RS485 control module) channels please refer to the pertinent user's guides. The guides can be downloaded from Echelon's web site at www.echelon.com.

This document also includes specifications for twisted pair cabling for use in train braking applications compliant with the requirements of the Association of American Railroads. The AAR application uses the PL-20 channel (PLT-22 Power Line Transceiver or PL 3120 or PL 3150 Power Line Smart Transceiver) operating over a doubly terminated twisted pair power cable 3 kilometers in length. In such applications a special, non-standard coupling circuit and cable terminations are required, please contact Echelon for details.

Network Cabling

TP/FT-10 Free Topology Channel

Five cable types have been validated for the TP/FT-10 channel. These cable types are:

| Cable Type | AWG | Diameter |
|--|--------------|----------|
| TIA 568A Category 5 or Category 6 cable | 24WAWG 0.5mm | |
| Belden 8471 (PVC jacket) or equivalent cable | 16AWG 1.3mm | |
| Belden 85102 (Tefzel jacket) or equal cable | 16AWG 1.3mm | |
| Level IV cable | 22AWG | 0.65mm |
| JY (st) Y 2x2x0.8 | 20.4AWG | 0.8mm |

2

The distance limitations, electrical characteristics, and suppliers of these cables follow. Link power applications have unique distance limitations based on power consumption. Please refer to the pertinent LPT user's guide for details.

TP/XF-78 Bus Topology Channel

One cable type has been validated for the TP/XF-78 channel (for use with the TPT/XF-78 Bus Topology Transceiver). The only approved cable type is:

| Cable Type | AWG | Diameter |
|----------------|-------|----------|
| Level IV cable | 22AWG | 0.65mm |

The distance limitations, electrical characteristics, and suppliers of this cable are presented below.

TP/XF-1250 Bus Topology Channel

Two cable types have been validated for the TP/XF-1250 channel (for use with the TPT/XF-1250 Bus Topology Transceiver). These cable types are:

| Cable Type | AWG | Diameter |
|---------------------------|-------|----------|
| TIA 568A Category 5 cable | 24AWG | 0.5mm |
| Level IV cable | 22AWG | 0.65mm |

The distance limitations, electrical characteristics, and suppliers of these cables are presented below.

TP-RS485 Channel

Channels employing RS-485 transceivers should use only a shielded, twisted pair cable approved by the manufacturer for use with EIA RS-485 transceivers.

PL-20 Channel for Train Braking

One cable type has been validated for use with the PL-20 channel for long distance signaling on S-4210 cable configured in a doubly terminated bus. This cable type is as follows:

| Cable Type | AWG | Diameter |
|-------------------------------|-------------|----------|
| AAR S-4210 twin-axial, 50 Ohm | 8WAWG 3.3mm | |
| cable | | |

€ECHELON

Cable Specifications

TIA 568A Category 5 or Category 6 Cable

The specifications for Category 5 or Category 6 cabling are defined by the Telecommunications Industry Association standard 568A. The typical parameters of these cables are as follows:

| Wire Diameter (mm/AWG) | Resistance Rloop Ω/km | Capacitance nF/km | Velocity of Propagation Vprop % of c |
|------------------------|--------------------------|-------------------|--------------------------------------|
| 0.51mm/24 168 | | 46 | 58 |

Echelon has qualified cabling that meets the TIA 568A standard, and any cabling – from any manufacturer - that meets this standard is acceptable.

For the TP/FT-10 channel operating in a <u>bus</u> topology, the maximum bus length of TIA 568A Category 5 or Category 6 cabling is 900 meters, with a maximum stub length of 3 meters.

For the TP/FT-10 channel operating in <u>free</u> topology, the maximum length of TIA 568A Category 5 or Category 6 cabling is 250 meters maximum node-to-node distance, and 450 meters maximum total wire length.

For the TP/XF-1250 channel operating in a <u>bus</u> topology, the maximum bus length of TIA 568A Category 5 or Category 6 cabling is 130 meters, with a maximum stub length of 0.3 meters. There are topology restrictions associated with the use of this channel – refer to Chapter 5 of the *TPT Twisted Pair Transceiver User's Guide* <u>before</u> installing any cabling for this channel.

Belden 8471 Cable

Belden 8471 16AWG (1.3mm) cable may be used only with the TP/FT-10 channel. Belden does not publish those 8471 cable parameters that affect signaling on TP/FT-10 channels, however, Echelon has measured the following important parameters:

| Wire Diameter (mm/AWG) | Resistance Rloop Ω/km | Capacitance nF/km | Velocity of Propagation Vprop % of c |
|------------------------|--------------------------|-------------------|--------------------------------------|
| 1.3mm/16 28 | | 72 | 55 |

For the TP/FT-10 channel operating in a <u>bus</u> topology, the maximum bus length of Belden 8471 cabling is 2700 meters, with a maximum stub length of 3 meters.

For the TP/FT-10 channel operating in <u>free</u> topology, the maximum length of Belden 8471 cabling is 400 meters maximum node-to-node distance, and 500 meters maximum total wire length.

EECHELON

Belden 85102 Cable

Belden 85102 16AWG (1.3mm) cable may be used only with TP/FT-10 channels. Belden does not publish those 85102 cable parameters that affect signaling on TP/FT-10 channels, however, Echelon has analyzed this cable in some detail. The following specifications can be used by cable suppliers to produce an equivalent cable:

| | Minimum | Typical | Maximum | Units | Condition |
|--------------------------|-----------|---------|---------|--------|-------------------|
| DC Resistance, each | 14.0 14.7 | | 15.5 | Ω/km | 20°C per ASTM D |
| conductor | | | | | 4566 |
| DC Resistance Unbalance | | | 5% | | 20°C per ASTM D |
| | | | | | 4566 |
| Mutual Capacitance | | | 55.9 | nF/km | Per ASTM D 4566 |
| Characteristic Impedance | 92 | 100 | 108 | Ω | 64kHz to 1MHz per |
| | | | | | ASTM D 4566 |
| Attenuation | | | | | |
| 20kHz | | | 1.3 | dB/km | 20°C per ASTM D |
| 64kHz | | | 1.9 | | 4566 |
| 78kHz | | | 2.2 | | |
| 156kHz | | | 3.0 | | |
| 256kHz | | | 4.8 | | |
| 512kHz | | | 8.1 | | |
| 772kHz | | | 11.3 | | |
| 1000kHz | | | 13.7 | | |
| Propagation Delay | | | 5.6 | nsec/m | 78kHz |

For the TP/FT-10 channel operating in a <u>bus</u> topology, the maximum bus length of Belden 85102 cabling is 2700 meters, with a maximum stub length of 3 meters.

For the TP/FT-10 channel operating in <u>free</u> topology, the maximum length of Belden 85102 cabling is 500 meters maximum node-to-node distance, and 500 meters maximum total wire length.

Level 4 Cable

Level 4 cables may be used with TP/FT-10, TP/XF-78, or TP/XF-1250 channels. The Level 4 cable specification used by Echelon and as originally defined by the National Electrical Manufacturers Association (NEMA) differs from the Category 4 specification proposed by the Electronic Industries Association/Telecommunication Industry Association (EIA/TIA). The following specifications can be used by cable suppliers to identify a compliant Level 4 cable – or produce an equivalent cable:

EECHELON

| Specifications apply to shielded or unshielded 22AWG (0.65mm) cable, 24AWG (0.5mm) cable shown in brackets [] if different | | | |
|--|-----------------------|--|--|
| D-C Resistance (Ohms/1000 feet at 20°C) | 18.0 [28.6] | | |
| maximum for a single copper conductor regardless | 10.0 [20.0] | | |
| of whether it is solid or stranded and is or is not | | | |
| metal-coated. | | | |
| D-C Resistance Unbalance (percent) maximum | 5 | | |
| Mutual Capacitance of a Pair (pF/foot) maximum | 17 | | |
| Pair-to-Ground Capacitance Unbalance | 1000 | | |
| (pF/1000 feet) maximum | | | |
| Characteristic In | pedance (Ohms) | | |
| 772kHz 102±15% | | | |
| 1.0MHz | 100±15% | | |
| 4.0MHz | 100±15% | | |
| 8.0MHz | 100±15% | | |
| 10.0MHz | 100±15% | | |
| 16.0MHz | 100±15% | | |
| 20.0MHz | 100±15% | | |
| Attenuation (dB/1000 | feet at 20°C) maximum | | |
| 772kHz 4.5 | [5.7] | | |
| 1.0MHz 5.5 | [6.5] | | |
| 4.0MHz 11.0 | [13.0] | | |
| 8.0MHz 15.0 | [19.0] | | |
| 10.0MHz 17.0 | [22.0] | | |
| 16.0MHz 22.0 | [27.0] | | |
| 20.0MHz 24.0 | [31.0] | | |
| Worst-Pair Near-End Crosstalk (dB) minimum. Val NEXT coupling loss for any pair combination at room | | | |
| , , , | • | | |
| determined using the formula NEXT (F _{MHz)} >NEXT(| | | |
| the range of 0.772MHz-20MHz for a length of 1000 f | eet. | | |
| 772kHz 58 | | | |
| 1.0MHz 56 | | | |
| 4.0MHz 47 | | | |
| 8.0MHz 42 | | | |
| 10.0MHz 41 | | | |
| 16.0MHz 38 | | | |
| 20.0MHz 36 | | | |

For the TP/FT-10 channel operating in a <u>bus</u> topology, the maximum bus length of Level 4 22AWG (0.65mm) cabling is 1400 meters, with a maximum stub length of 3 meters.

For the TP/FT-10 channel operating in <u>free</u> topology, the maximum length of Level 4 22AWG (0.65mm) cabling is 400 meters maximum node-to-node distance, and 500 meters maximum total wire length.

For the TP/XF-78 channel operating in a <u>bus</u> topology, the maximum bus length of 4 22AWG (0.65mm) cabling is 1400 meters, with a maximum stub length of 3 meters. There are topology

€ECHELON

restrictions associated with the use of this channel – refer to Chapter 5 the *TPT Twisted Pair Transceiver User's Guide* **before** installing any cabling for this channel.

For the TP/XF-1250 channel operating in a <u>bus</u> topology, the maximum bus length of 4 22AWG (0.65mm) cabling is 130 meters, with a maximum stub length of 0.3 meters. There are topology restrictions associated with the use of this channel – refer to Chapter 5 of the *TPT Twisted Pair Transceiver User's Guide* <u>before</u> installing any cabling for this channel.

JY (st) Y 2x2x0.8 Cable

JY (st) cable is available only in Europe, and may be used only with the TP/FT-10 channel. Cable parameters that affect signaling on TP/FT-10 channels are not published for this cable, however, Echelon has measured the following important parameters:

| Wire Diameter (mm/AWG) | Resistance Rloop Ω/km | Capacitance nF/km | Velocity of Propagation Vprop % of c |
|------------------------|--------------------------|-------------------|--------------------------------------|
| 0.8mm/20.4 73 | | 98 | 41 |

For the TP/FT-10 channel operating in a bus topology, the maximum bus length of JY (st) cabling is 900 meters, with a maximum stub length of 3 meters.

For the TP/FT-10 channel operating in <u>free</u> topology, the maximum bus length of JY (st) cabling is 320 meters maximum node-to-node distance, and 500 meters maximum total wire length.

S-4210 Cable for Train Braking on PL-20 Channel

S-4210 cable is a two conductor, twinaxial cable for exclusive use with the PLT-22 Power Line Transceiver and PL 3120/PL 3150 Power Line Smart Transceivers. Specialized coupling and termination circuits are required for this application.

| Wire Diameter (mm/AWG) | Conductors | Characteristic Impedance (Ω) | Construction |
|------------------------|------------|------------------------------|--------------|
| 3.3mm/8 2 | | 50 | Twinaxial |

The PL-20 channel for train braking must be operated in a doubly terminated bus topology, and will function at distances of at least 3 kilometers with 160 PLT-22-based or smart transceiver devices, and no stubs. Contact your Echelon representative for details on coupling circuits.

EECHELON

Untwisted wires, or cables containing flat or parallel untwisted conductors must not be used on an LONWORKS twisted pair channel. The use of thses wiers/cables may result in improper network operation and could, under certain circumstances, result in damage to nodes connected to such a channel.

Cable Suppliers

The following cable suppliers have stated that their listed cables comply with Echelon wire guidelines.

Belden Wire & Cable Company

Junction Boxes

A junction box provides an interface between the twisted pair cable and one or more LONWORKS application nodes. The twisted pair cabling used between junction boxes will depend on the type of transceiver being installed. For free topology twisted pair systems, including the FT 3120/FT 3150 Free Topology Smart Transceiver, FTT-10A Free Topology Transceiver, LPT-11 Link Power Transceiver (figure 1), the PLT-22 Power Line Transceiver, and the PL 3150/PL 3120 Power Line Smart Transceiver, the wiring is typically specified separately for each transceiver. For systems using TP/XF-78, TP/XF-1250, TP-RS485, TPT/XF-78, or TPT/XF-1250 modules the bus wiring is 22AWG (0.65mm), while either 22 or 24AWG (0.5mm) cabling may be used on the stub between the junction box and the LONWORKS application node (figure 2).

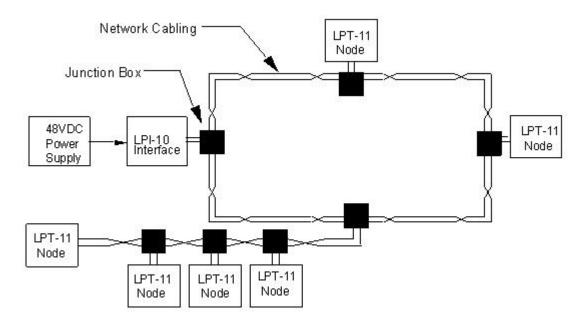

Figure 1 Typical Network Topology for Free Topology Networks (LPT-11 Link Power Transceiver shown)

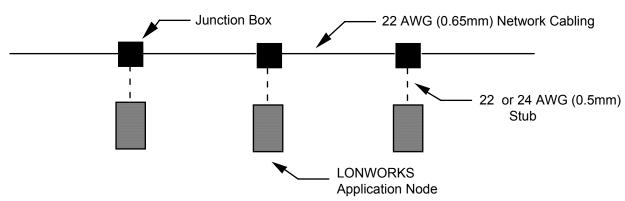

Figure 2 Typical Network Topology for Bus-Topology Networks

A Pass-Thru Junction Box is intended to be a splice point only and does not include interconnections for a local node. A Stub Junction Box provides both a stub for a local node and a convenient splice point for cables passing to the previous and next junction boxes. A Local Loop Terminal Junction Box provides terminals for a local loop and a splice point for cables passing to the previous and next junction boxes. These two junction boxes are intended to be used when the distance between the junction box and the local node exceeds the allowed stub length, or when a loop-style architecture is desirable.

The connector that will be used to connect the twisted wire pair to the application node is typically defined by the industry application.

For the purposes of the discussion about junction box design that follows, we need to establish a common definition of terms. These terms, and their definitions, are presented below.

The color of the LONIN/ODIC network coble conductors. In

| Color Code | The color of the LONWORKS network cable conductors. In systems using a single twisted wire pair (two wire), the colors will be white/blue (W/B) and blue (B). In systems using a dual twisted wire pair (four wire), the colors will be white/blue (W/B), blue (B), white/orange (W/O)), and orange (O). A shield drain wire (S) may be provided in either single or dual twisted wire pair networks, and will be clearly designated by color coding or other markings as being a shield or drain wire. |
|-------------------------------------|---|
| IN | Wiring that originates at the previous node. |
| Insulation Displacement Terminal | A connector arrangement in which wiring is affixed to insulation displacement terminals. Multiple wires can be attached to a single connector bus either by permitting two conductors to be inserted in the same displacement terminal or by providing two or more displacement terminals on a common bus. |
| Local Loop | A loop of bus cable that exits from a junction box, interconnects with a node, and returns to the junction box. |
| Local Power | A power source that provides operating power to a locally powered node. |

Calar Cada

LONWORKS Engineering Bulletin

Junction Box and Wiring Guidelines

OUT Wiring that originates at the current node.

Pass-Thru A junction box at which wires are spliced, and to which no nodes

are connected.

Screw Terminal A connector arrangement in which wiring is affixed to screw

terminals. Washers are provided to separate multiple conductors

attached to a single screw.

Stub A T-tap from a bus cable that originates at a junction box and

terminates at a node.

2-Wire Link Power 2-wire link power permits the transmission of both node power

and LonTalk® network data on a common pair of wires. Link power nodes may or may not require local power depending on the system topology and local power consumption levels.

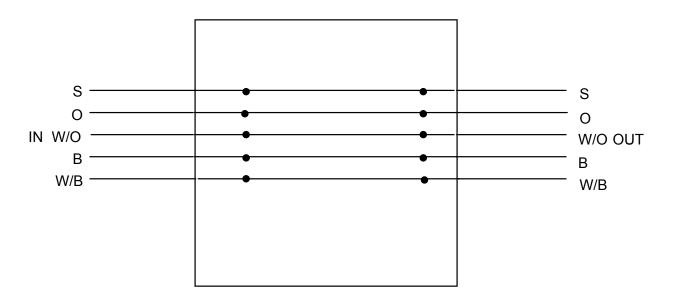

Pass-Thru Junction Box

A pass-thru junction box provides a convenient point at which to splice two cables. No nodes or connectors are provided at a pass-thru junction box. There are three primary methods of implementing a splice at a pass-thru junction box:

- 1. Screw Terminals: IN and OUT wires are stripped and wrapped around screw terminals, which are tightened to retain the wires and make a secure electrical contact. Each screw is supplied with two or more washers. The washers separate conductors where multiple wires are landed at one screw, thereby preventing wires from being ejected as the screw is tightened. IN terminals 1-5 are connected directly by buses, circuit card traces, or wire jumpers, to OUT terminals 1-5, respectively. These connections provide the "pass-thru" function by routing the incoming signals to the outgoing terminals.
- 2. Insulation Displacement Terminals: IN and OUT wires are punched down on barrel or telco insulation displacement terminals. IN terminals 1-5 are connected directly by buses, circuit card traces, or wire jumpers, to OUT terminals 1-5, respectively. These connections provide the "pass-thru" function by routing the incoming signals to the outgoing terminals.
- 3. Crimp Connectors: IN and OUT wires are spliced together using crimp connectors. The connectors are then fitted inside the junction box, which itself contains no terminals.

EECHELON

Pass-Thru Terminal Junction Box

Terminal Legend

| <u>Terminal</u> | Wire Color | <u>Function</u> |
|-----------------|--------------|---------------------------------------|
| 1 | White/Blue | Data comm. or + for 2-wire link power |
| 2 | Blue | Data comm. or - for 2-wire link power |
| 3 | White/Orange | Power + if locally powered |
| 4 | Orange | Power GND if locally powered |
| 5 | S - Shield | Cable shield if used |

Stub Junction Box

A stub junction box provides a convenient point at which to splice two cables and provide a stub for servicing a local node. There are two primary methods of implementing a stub connector junction box:

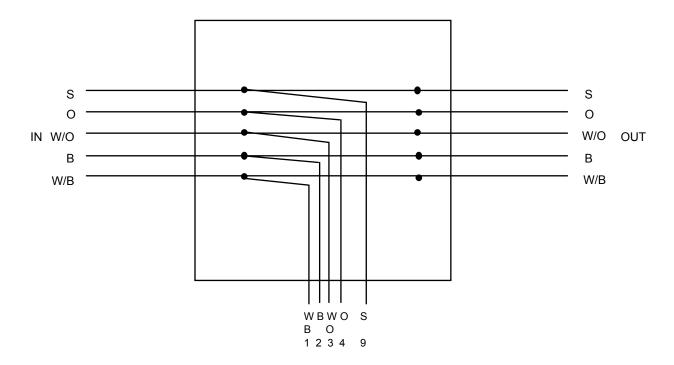

- 1. Screw Terminal 10 Wire Pin Connector: IN and OUT wires are stripped and wrapped around screw terminals, which are tightened to retain the wires and make a secure electrical contact. Each screw is supplied with two or more washers. The washers separate conductors where multiple wires are landed at one screw, thereby preventing wires from being ejected as the screw is tightened.
- 2. Insulation Displacement 10 Wire Pin Connector: IN and OUT wires are punched down on barrel or telco insulation displacement terminals. Both stranded and solid conductor wires are supported.

The following section applies to both versions of a stub connector junction box.

IN terminals 1-5 are connected directly by buses, circuit card traces, or wire jumpers, to OUT terminals 1-5, respectively. These connections provide the "pass-thru" function by routing the incoming signals to the outgoing terminals.

EECHELON

Stub Junction Box

Terminal Legend

| <u>Termin</u> | <u>al</u> | Wire Color | <u>Function</u> |
|---------------|-----------|--------------|---------------------------------------|
| 1 | | White/Blue | Data comm. or + for 2-wire link power |
| 2 | | Blue | Data comm. or - for 2-wire link power |
| 3 | | White/Orange | Power + if locally powered |
| 4 | Oran | ge Powe | r GND if locally powered |
| 5 | | S - Shield | Cable shield if used |

Tap Legend

| <u>Termin</u> | <u>al</u> | Wire Color | <u>Function</u> |
|---------------|-----------|--------------|--|
| 1 | | White/Blue | IN Data comm. or + for 2-wire link power |
| 2 | | Blue | IN Data comm. or - for 2-wire link power |
| 3 | | White/Orange | IN Power + if locally powered |
| 4 | | Orange | IN Power GND if locally powered |
| 5 -8 | Not | used | |
| 9 | | S - Shield | IN Cable shield |
| 10 | Not | used | |

Local Loop Terminal Junction Box

A local loop terminal junction box provides a convenient point at which to terminate two cables and provide a wiring loop for servicing a local node. There are two primary methods of implementing a local loop terminal junction box:

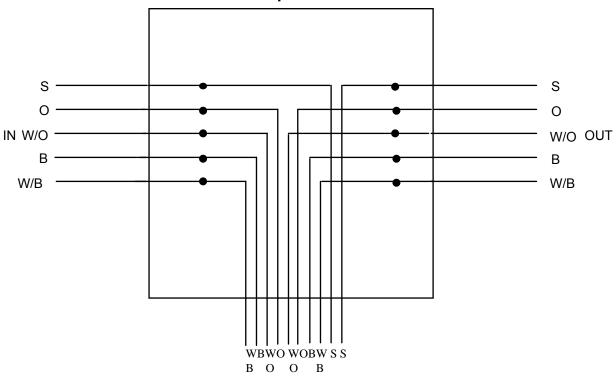

- 1. Screw Terminal 10 Wire: IN and OUT wires are stripped and wrapped around screw terminals, which are tightened to retain the wires and make a secure electrical contact. Each screw is supplied with two or more washers. The washers separate conductors where multiple wires are landed at one screw, thereby preventing wires from being ejected as the screw is tightened. The local node is wired directly to the In and OUT terminals.
- 2. Insulation Displacement 10 Wire: IN and OUT wires are punched down on barrel or telco insulation displacement terminals. The local node is wired directly to the In and OUT terminals.

The following section applies to both versions of a local loop connector junction box.

IN terminals and OUT terminals are isolated from each other: this junction box does not perform a "pass-thru" function.

EECHELON

Local Loop Terminal Junction Box

Terminal Legend

| Terminal | | Wire Color | <u>Function</u> |
|-----------------|------|--------------|---------------------------------------|
| 1 | | White/Blue | Data comm. or + for 2-wire link power |
| 2 | | Blue | Data comm. or - for 2-wire link power |
| 3 | | White/Orange | Power + if locally powered |
| 4 | Oran | ge Powe | r GND if locally powered |
| 5 | | S - Shield | Cable shield if used |

Local Loop Legend

| <u>Terminal</u> | Wire Color | <u>Function</u> |
|-----------------|--------------|---|
| 1 | White/Blue | IN Data comm. or + for 2-wire link power |
| 2 | Blue | IN Data comm. or - for 2-wire link power |
| 3 | White/Orange | IN Power + if locally powered |
| 4 | Orange | IN Power GND if locally powered |
| 5 | White/Orange | OUT Power + if locally powered |
| 6 | Orange | OUT Power GND if locally powered |
| 7 | Blue | OUT Data comm. or - for 2-wire link power |
| 8 | White/Blue | OUT Data comm. or + for 2-wire link power |
| 9 | S - Shield | IN Cable shield |
| 10 | S - Shield | OUT Cable shield |

Appendix A Application for Cable Approval

This Appendix is intended for use by vendors who manufacture electrical cables and would like those cables approved by Echelon for use on one or more LONWORKS channels. Echelon approves cables based on information supplied by the cable vendor: the vendors self-certify that their products comply with Echelon's published specifications, and the responsibility to meet and adhere to these specifications reside solely and exclusively with the cable vendors. Echelon will not test any cables or validate the electrical characteristics of the submitted cables. Echelon relies exclusively on the veracity of the information provided by the cable vendors.

To submit a cable for approval, please complete the vendor information for each geographic area in which your products are sold.

For each cable being submitted for approval, please complete the pertinent cable type form. You must include entries for every blank space in the table. Failure to fill out the form completely will result in the rejection of your application. One form must be completed for each cable submitted for your approval. For reference purposes, the mandated specifications are shown in italicized type in each table.

Send or fax your completed application to:

Echelon 550 Meridian Avenue San Jose, CA 95126 USA Attn: Echelon Support

Fax number: +1-408-790-3801 (attention Echelon Support)
